01

Revenue & 5-Year Trend

**\$307.6K**

2019 Peak Revenue

**-\$82K**

Lost per year (4 years)

**-29%**

Revenue drop after 2019

**\$225K**

Avg annual revenue 2020–2023

Revenue dropped 29% after 2019 and has flatlined for 4 consecutive years. This is structural — not seasonal. The \$82K/year deficit maps directly to the product decisions made at the end of 2019.

The Discontinuation Problem

The 3 highest-rated categories vanished after 2019. The 3 lowest-rated categories remained. Revenue has not recovered since.

Average Customer Rating by Category

Discontinued Categories — 2019 Data

Category	Revenue	Margin	Rating	Post-2019
Food & Beverages	\$53.5K	~40%	7.1 / 10	ZERO
Health & Beauty	\$46.9K	~40%	7.0 / 10	ZERO
Sports & Travel	\$52.5K	~39%	6.9 / 10	ZERO

Critical Finding

All 6 categories run at ~39–40% profit margins — identical. There is no financial justification in the data for removing the 3 highest-rated categories. The business dropped its best products and kept its worst.

Category Deep Dive — Concentration Risk & the Zombie

Total Revenue by Category (\$K, all years)

Food, Health & Beauty, Sports & Travel: 2019 only | Electronic Accessories: 87% revenue collapse post-2019

80.9% Concentration Risk

Fashion Accessories + Home & Lifestyle account for 80.9% of total revenue. One supply disruption or demand shift ends the business.

Electronics: The Zombie Category

\$52K in 2019 → \$6.5K/year average post-2019. An 87% collapse. It's technically active but contributes 6.5% of revenue — dead weight on the books.

Electronics Credit Card Trap

Electronics customers pay by credit card at 59.9% — highest of any category. Maximum payment cost, near-zero revenue. A double loss.

Payment Methods & Hidden Costs

Revenue by Payment Method (All Years)

■ Credit Card ■ Ewallet ■ Cash

Credit Card 42.7%

Highest volume. Merchant processing fees of 1.5–2.5% mean \$8K–\$13K in avoidable annual fees. At 100 branches, this compounds quickly.

Ewallet 38.9%

Lower processing cost than cards. A 10% shift from credit card → Ewallet saves ~\$800–\$1,300/year. Easy win with a 1–2% loyalty incentive.

Cash 18.4%

Lowest digital processing cost but declining. Cash handling, security, and reconciliation costs partially offset savings. Monitor the trend.

Recommendation:

Introduce a 1–2% Ewallet discount or loyalty point bonus. Even shifting 10% of credit card volume to Ewallet reduces fees meaningfully across 4,248 credit card transactions. Low effort, immediate impact, no product change required.

Shift Performance & Top Branches

Morning

2,087

Transactions · 20.9%

6-hour window, lowest utilisation — biggest opportunity

Afternoon

4,636

Transactions · 46.5%

Peak shift — staffing & stock must anchor here

Evening

3,246

Transactions · 32.6%

Strong despite shorter window than morning

Prioritised Recommendations

P1

Reinstate Food & Beverages — Pilot 10 branches

Highest-rated category (7.1/10), 40% margin, \$53.5K in 2019 from just 174 transactions. A focused pilot is low risk with clear upside.

High Impact

Medium Effort

P2

Diversify Beyond 2 Categories

Reintroduce Health & Beauty and Sports & Travel to break the 80.9% revenue concentration. Identical margins to current portfolio — no trade-off.

High Impact

Medium Effort

P3

Ewallet Incentive — 1–2% Discount or Loyalty Points

Shift volume from 42.7% credit card channel. Reduces processing fees, speeds checkout, and is reversible within 30 days if uptake is low.

Medium Impact

Low Effort

P4

Morning Revenue Drive — Time-Limited Offer

A 6-hour window producing only 20.9% of transactions is structural underperformance. Test a morning discount or 2× loyalty points before 11am.

Medium Impact

Low Effort

P5

Decide on Electronics — Invest or Discontinue

\$6.5K/year from 419 transactions across 5 years. It's earning shelf space and management attention it can't justify. Make the call.

Low Impact

Low Effort

Key Takeaways

Kabeer Khan

kabeerk992@gmail.com

linkedin.com/in/kabeer-khan-analyst

github.com/kabeerK992

Revenue dropped 29% after 2019 and never recovered — structural, not cyclical.

3 dropped categories had identical ~40% margins. No financial reason to remove them.

The business runs on 2 categories. Electronics is functionally inactive at \$6.5K/year.

42.7% credit card use creates avoidable processing costs — Ewallet incentive is the fix.

Morning shift (20.9% of txns) is structurally underutilised. A morning offer will move it.
